

VOLUME 2026 · EDITION 17

17

Week of April 20 – 26, 2026

AI-reshaped GTM · funding, exec moves, RIFs, launches.

THE WEEK IN BRIEF

- 01** Quiet week on the watchlist, loud month in the alumni graph. Zero funding, zero exec moves, zero layoffs, zero major launches at Betts-target companies between April 20–26.
- 02** Cross-week pattern matters more than this week's silence. Clari+Salesloft co-released their MCP Server in W16; the Alliances VP gap that creates is now ~10 days old and ripening. Atlassian shipped AI data-training settings on April 16 — the Rovo enterprise procurement unlock — and the field-org gap is the constraint that converts this into a Q2 search.
- 03** The candidate side is loud. Salesforce Agentforce plus Q1 '26 marketing alumni bench is the deepest pool of AI-era GTM operators in the market right now. Index-don't-pitch posture continues; 30–60 days from match-on-search.
- 04** How to read a quiet week: it's the quiet weeks that test the workflow. Honest reporting of zero signals beats inventing them. The value compounds in cross-week pattern recognition, not in any single week's noise.

01 Cross-Week Pattern Read

3 ARCS

REVTECH · VISTA-BACKED MERGED ENTITY

Clari + Salesloft — three weeks to a hiring wave

● **W14** APR 1

Rick Hasselman named CFO

First operator hire of the merged entity. CFOs at Vista-backed companies optimize for revenue-per-AE; product velocity follows within a quarter.

● **W16** APR 14

MCP Server co-launch with Salesforce Agentforce

Joint cross-ecosystem product motion. No VP Alliances owner exists today on either side of the merger.

● **W17** APR 20–26

Quiet on the wire

This is the gap where the listings are written, not yet posted. The standard recruiter waits for the brief; the GTM Radar recruiter is mid-conversation with the bench.

IMPLICATION · VP Alliances + 6–8 person Partner Manager cohort sit inside this 3-week arc. None posted yet. The bench-build is the work this week — names from former Clari/Salesloft regional VPs now running revtech partnerships at Outreach, Apollo, Demandbase.

Atlassian — Rovo procurement unlock to field-org search

● **W16** APR 16

AI data-training settings release

Cleared the InfoSec block that had been holding Rovo enterprise deals in procurement purgatory.

● **W17** APR 20–26

Stuck pipe re-opens silently

Deals that paused at security review now move. Atlassian has no named Rovo field leadership at the enterprise tier — the gap that converts pipe into a Q2 search.

IMPLICATION · Rovo VP / Enterprise AE shortlist, 5 names, lands at Atlassian GTM leadership by April 29. Warm air cover: 'we saw the procurement signal, here's the bench.' Two-week window before they source internally.

CANDIDATE-SIDE · THE BENCH IS LOUD

Salesforce Agentforce + Q1 '26 marketing alumni

● **WQ4-Q1** DEC '25 – MAR '26

Agentforce reorg + marketing reduction wave

Deepest pool of AI-era GTM operators currently between roles. Most still indexing, not yet searching.

● **W17** APR 20–26

30–60 days from match-on-search

Index-don't-pitch posture is the right posture. The wave converts to active conversations as Atlassian/Clari/Ramp role briefs land in May–June.

IMPLICATION · Build relationships now, not pitches. The recruiter who has 30 warm Agentforce alumni in May is the recruiter who closes Q2 searches in 14 days instead of 60.

02 Scan Log & Verification

TWO PASSES

FIRST PASS · APR 20-21, 2026

Zero on-target Betts signals. Off-watchlist only: AcuityMD (medtech), Reliable Robotics (aviation), Tava Health (behavioral), Recursive Superintelligence (foundation model), OpenAI/Hiro acqui-hire, X Square Robot (embodied AI). None convert.

RE-SCAN · APR 22-26, 2026

Zero on-target Betts signals. Off-watchlist context-only: Lative + Mperativ acquisition Apr 22 (RevTech CRO/CMO data-alignment consolidation; analyst-blog source — not strong enough for primary inclusion). Schematic seed Apr 24 (\$6.5M, off-list, too small).

VERIFIED & REJECTED · WHAT DIDN'T MAKE THE BRIEFING

Rho Series B raise this week	Page-update timestamp on a 2024 announcement. Not new news.
Apollo \$110M raise	Conflated with the actual 2022 raise. No 2026 round.
Abnormal FedRAMP authorization	2025 announcement. Outside W17.
Vectra — Derek Phillips named CRO	December 2025 announcement. Outside W17.
Mercury \$5B valuation round	Rumor only. No primary source.
Zendesk AI agent rollout	March 30 announcement. Outside W17 window.

03 The Recruiter Playbook

3 HYPOTHESES

Three specific outreach moves for this week — who to call, what to say, why now.

1

Convert the W16 Atlassian unlock into the Rovo GTM search.

Atlassian's April 16 AI data-training settings release (W16 signal) cleared the InfoSec block on Rovo enterprise procurement. That moves stuck deals back into the pipe — and immediately exposes Atlassian's lack of named Rovo field leadership at the enterprise tier. The bench is ready: Salesforce Agentforce alumni from Q4 2025 – Q1 2026 reductions, plus AI-native AEs (Harvey, Writer, Glean) with prior quota >\$2M. Two-week window before Atlassian sources internally.

→ **OUTBOUND A 5-NAME ROVO VP / ENTERPRISE AE SHORTLIST TO ATlassian's GTM LEADERSHIP BY APRIL 29. LEAD WITH THE APRIL 16 UNLOCK AS WARM AIR COVER — 'WE SAW THE PROCUREMENT SIGNAL, HERE'S THE BENCH THAT CLOSES THE GAP.'**

2

Pre-position the Clari + Salesloft Alliances VP search.

Clari and Salesloft co-launched their MCP Server in W16 — a joint cross-ecosystem motion neither company has a VP-level Alliances owner for today. The merged Vista-backed entity uses external recruiters at the VP tier. The work this week is candidate-side: build the bench before the search posts. Target former Clari/Salesloft regional VPs now running revtech partnerships at adjacent platforms (Outreach, Apollo, Demandbase). 6–8 names, half from each, with current-role context.

→ **BENCH-BUILD, NOT PITCH. PULL THE CANDIDATE LIST THIS WEEK. SCHEDULE DISCOVERY CALLS WITH 2–3 WARMEST NAMES BY APRIL 30. PITCH LANDS WHEN THE SEARCH OPENS — LIKELY 30–60 DAYS POST-LAUNCH.**

The pattern, not the role: pitch Betts on cross-week signal stacking.

Three-week arc: W14 = exec / CFO signals at Clari and revtech peers. W16 = product launches (Clari+Salesloft MCP, Atlassian Rovo unlock, Ramp's fourth consecutive AI release). W17 = quiet — which is precisely when the hiring waves those launches require start to surface. The standard recruiter pitches a single role; the GTM Radar pitch is the multi-week pattern. Caroline's team can walk into the next Atlassian / Clari / Ramp conversation with a thesis instead of a search brief.

→ SLOT 'CROSS-WEEK SIGNAL STACKING' INTO THE NEXT BETTS CLIENT MEETING DECK. BRING THE 3-WEEK ARC AS A SINGLE PAGE. USE THE QUIET WEEK AS THE PROOF POINT FOR WHY A RECURRING INTEL FEED BEATS REACTIVE SEARCH WORK.
