

VOLUME 2026 · EDITION 17

# 17

*Week of April 20 – 26, 2026*

*AI-reshaped GTM · funding, exec moves, RIFs, launches.*

---

## THE WEEK IN BRIEF

- 01** Quiet week on the watchlist, loud month in the alumni graph. Zero funding, zero exec moves, zero layoffs, zero major launches at Betts-target companies between April 20–26.
- 02** Cross-week pattern matters more than this week's silence. Clari+Salesloft co-released their MCP Server in W16; the Alliances VP gap that creates is now ~10 days old and ripening. Atlassian shipped AI data-training settings on April 16 — the Rovo enterprise procurement unlock — and the field-org gap is the constraint that converts this into a Q2 search.
- 03** The candidate side is loud. Salesforce Agentforce plus Q1 '26 marketing alumni bench is the deepest pool of AI-era GTM operators in the market right now. Index-don't-pitch posture continues; 30–60 days from match-on-search.
- 04** How to read a quiet week: it's the quiet weeks that test the workflow. Honest reporting of zero signals beats inventing them. The value compounds in cross-week pattern recognition, not in any single week's noise.

# 05 The Recruiter Playbook

3 HYPOTHESES

*Three specific outreach moves for this week — who to call, what to say, why now.*

1

## **Convert the W16 Atlassian unlock into the Rovo GTM search.**

Atlassian's April 16 AI data-training settings release (W16 signal) cleared the InfoSec block on Rovo enterprise procurement. That moves stuck deals back into the pipe — and immediately exposes Atlassian's lack of named Rovo field leadership at the enterprise tier. The bench is ready: Salesforce Agentforce alumni from Q4 2025 – Q1 2026 reductions, plus AI-native AEs (Harvey, Writer, Glean) with prior quota >\$2M. Two-week window before Atlassian sources internally.

→ **OUTBOUND A 5-NAME ROVO VP / ENTERPRISE AE SHORTLIST TO ATlassian's GTM LEADERSHIP BY APRIL 29. LEAD WITH THE APRIL 16 UNLOCK AS WARM AIR COVER — 'WE SAW THE PROCUREMENT SIGNAL, HERE'S THE BENCH THAT CLOSES THE GAP.'**

2

## **Pre-position the Clari + Salesloft Alliances VP search.**

Clari and Salesloft co-launched their MCP Server in W16 — a joint cross-ecosystem motion neither company has a VP-level Alliances owner for today. The merged Vista-backed entity uses external recruiters at the VP tier. The work this week is candidate-side: build the bench before the search posts. Target former Clari/Salesloft regional VPs now running revtech partnerships at adjacent platforms (Outreach, Apollo, Demandbase). 6–8 names, half from each, with current-role context.

→ **BENCH-BUILD, NOT PITCH. PULL THE CANDIDATE LIST THIS WEEK. SCHEDULE DISCOVERY CALLS WITH 2–3 WARMEST NAMES BY APRIL 30. PITCH LANDS WHEN THE SEARCH OPENS — LIKELY 30–60 DAYS POST-LAUNCH.**

## The pattern, not the role: pitch Betts on cross-week signal stacking.

Three-week arc: W14 = exec / CFO signals at Clari and revtech peers. W16 = product launches (Clari+Salesloft MCP, Atlassian Rovo unlock, Ramp's fourth consecutive AI release). W17 = quiet — which is precisely when the hiring waves those launches require start to surface. The standard recruiter pitches a single role; the GTM Radar pitch is the multi-week pattern. Caroline's team can walk into the next Atlassian / Clari / Ramp conversation with a thesis instead of a search brief.

→ SLOT 'CROSS-WEEK SIGNAL STACKING' INTO THE NEXT BETTS CLIENT MEETING DECK. BRING THE 3-WEEK ARC AS A SINGLE PAGE. USE THE QUIET WEEK AS THE PROOF POINT FOR WHY A RECURRING INTEL FEED BEATS REACTIVE SEARCH WORK.
